## SUMMARY

AI/ML Engineer and Technical Lead specializing in production-grade agentic AI systems for the insurance and financial services domain. Experienced in architecting and deploying LLM-powered applications, conversational AI agents, compliance automation systems, and real-time voice interfaces across enterprise environments.

Led development of AI-driven insurance workflow platforms including compliance intelligence agents, conversational sales copilots, GEO (Generative Engine Optimization) pipelines, and multimodal sales analytics systems capable of extracting structured customer insights from large-scale conversational and enterprise data.

Worked extensively on building and fine-tuning transformer architectures and LLM-based systems for domain-specific use cases, including sales intelligence, conversational automation, and customer personalization. Experienced in scalable inference systems, retrieval-augmented generation (RAG), full-duplex voice AI, and enterprise-grade AI orchestration.

## WORK EXPERIENCE

### Technical Lead – AI Engineering | Bajaj Life Insurance

Dec 2025 – Present | Pune, India

- Led development of a production-grade compliance intelligence platform for insurance workflows, transforming internal AI proof-of-concepts into deployable enterprise applications.
- Architected and deployed LLM-powered conversational systems for insurance onboarding, policy guidance, workflow automation, and customer support operations.
- Built multimodal sales analytics pipelines capable of processing sales-call recordings and extracting structured customer intelligence, behavioral signals, and actionable business insights.
- Developed GEO (Generative Engine Optimization) pipelines to improve AI-native discoverability and conversational relevance of insurance products across search and assistant ecosystems.
- Worked on transformer-based architectures and domain-specific LLM fine-tuning using enterprise sales interaction datasets to improve conversational quality and response accuracy.
- Collaborated across compliance, business, and engineering teams to productionize secure, scalable, and governance-aligned AI systems for enterprise deployment.

### Dev Lead, Bajaj Finserv Direct Ltd

June 2022 – Nov 2025 | Pune, India

- Dev Lead for a 10-member team delivering high-impact term-insurance journeys; **led APIs, deployments, and cross-team integration with Bajaj Allianz (25% efficiency gain).**
- Improved performance, **SEO**, and engagement via **Angular optimization and SSR**, achieving up to 30% performance and 20% engagement uplift.
- Enhanced scalability and security, fixed critical auth issues (VAPT)**, and contributed to Bajaj Finserv Asset Management NFO launch driving 50% user adoption.

## EDUCATION

Bachelor of Technology in Apr 2018 - May 2022

Computer Science Engineering

SRM University

- 8.8 CGPA

## SKILLS

- |           |                |               |
|-----------|----------------|---------------|
| • Java    | • Docker       | • Python,     |
| • Angular | • API Design & | LangChain,    |
| • Next.js | Integration    | Hugging Face  |
| • Vite    | • Redis &      | Transformers, |
|           | Apache Kafka   | PyTorch       |

## PROJECTS, AWARDS AND RESEARCH PAPERS

- full-duplex-moshi-agent** – A Python-based implementation building on the Moshi full-duplex spoken dialogue model (forked from kyutai-labs/moshi). This project explores real-time voice-enabled LLM interactions suitable for agentic interfaces and conversational AI in local environments.
- compliance-agent**– Enterprise AI compliance platform designed for insurance workflows, enabling intelligent validation, policy-aware workflow enforcement, and conversational compliance assistance for regulated enterprise environments.
- Aetherflow** – Enterprise-grade AI orchestration platform designed for insurance workflow automation, conversational intelligence, compliance operations, and AI-assisted customer engagement.
- Esteemed Contributor to Financial Innovation Award**
- COMPEX Indian Embassy Scholarship Scheme Awardee**
- SustainAi:Enhancing sustainable energy forecasting** : Paper presented at the 1st International Conference on Computing for Science, Engineering & Artificial Intelligence (CSEAI 2023), organized in collaboration with California State University and the International Association of Academicians.
